NEXRAD Doppler radar is the National Weather Service's new network of high tech weather radars that detect the location and intensity of precipitation with a level of accuracy and detail never before available. Some of the radar returns displayed may not represent precipitation, due to ground clutter and other operational limits of weather radar. Further details on [how to interpret and use Doppler radar data](#) are available in our extensive [glossary](#).

## Weather News

### National Summary

Friday February 28, 1997

3:00 AM EST

On Thursday, areas across the Midwest had a respite from the recent barrage of stormy weather. However, a potent disturbance will pass through the southern Rockies and eject onto the Plains Friday, causing more snow and rain for portions of the Plains and Midwest through Saturday ([full details](#))

### The Calm Before the Next Big Storm

Thursday, February 27, 1997 2:23 PM EST

Residents of much of the East can look forward to a little respite in the rainy weather today. Unfortunately, another soggy storm is expected to push into the region from the west as the weekend approaches ([full details](#))

### Fire fighters Prepare For Spring Blazes

Thursday, February 27, 1997 2:26 PM EST

It only takes a little spark to start a fire that can destroy acres of land. Firefighters in Oklahoma are preparing for the grass fires that usually start popping up in the spring ([full details](#))

## **The Weather Channel Gains In PC Meter Ratings**

The Weather Channel, (TWC), posted impressive gains in the December PC Meter ratings. TWC finished third in the News/Information/Entertainment category ranking behind only ZDNet and Pathfinder. TWC increased by more than one point in two months, making it the biggest gainer in this category's top twenty sites.

### **TWC Blows Away Competition**

With the latest results in from PC Meter, TWC has moved steadily in front of its closest weather competitor, Intellicast. Intellicast ranked 11th with a rating of 3.4, well behind TWC's 4.9 rating. TWC also lead other news related sites including USAToday, CNN and MSNBC, which ranked 8th, 9th and 10th respectively.

### **About PC-Meter**

PC-Meter provides audience measurement of World Wide Web sites and on-line services. It is the only research service providing unduplicated measurement of audience exposure ("reach") at Web sites, demographics on home-based Web surfers, and measurement of all sites on the Web.

The information is collected digitally via PC-Meter software, which is installed on panel members' home PCs and which has a patent pending. Unlike "site-centric" Web measurement systems, PC-Meter obtains information from a panel of 10,000 households that is demographically balanced to represent the population of U.S. PC owners. Test panels are also in place in Germany, France and the United Kingdom.

\*Information gathered from PC Meter Website and Broadcasting & Cable, 2/17/97 page 47.
